

## New This Year - Sphero Ball

Sphero is an app controlled ball, the size of a large ping pong ball. Eleven 4th and 5th grade students have been active in a gaming and coding club this year, learning about coding basics through the use of Sphero. Students can control the ball's move through water, over the ground or make it take flight off ramps, using computer programs that they wrote themselves! Students test out their robotics, math and science skills and can measure distances traveled, speed or whatever their mind moves them to do!

The Sphero experience program is a very effective learning tool. Commented one parent, "My son is totally engaged in the Sphero activities. He thinks Sphero is the coolest thing and now wants one for Christmas."
